2010 Water Meter Replacement Project

Project Information

Location: Martis Landing area
Duration: July 30 through August 31, 2010
Contact Info: Josh Detwiler or Matt Mackenzie at (530) 562-0669 or Eric Martin or Mike Geary at (530) 562-0747
Contractor: Aspen Developers
Traffic Control: None

Project Description

This project consists of excavation and replacement of 107 existing meters and boxes with new ones. The new meters are compatible with the District's Automatic Meter Reading (AMR) System, which allows staff to collect water usage data via radio by simply driving by the property. The District leverages this technology by performing reads more frequently. The data allows us to identify water leaks quicker, thereby minimizing our customers' water bills and conserving water.

The work also includes the installation of customer-side shut-off valves and associated appurtenances at each service. It will require disconnecting and reconnecting drinking water service lines and restoration of ground surfaces.

The attached exhibit depicts which residences will receive new meter boxes.

Water Shut-Offs

While replacing the meters, water shut offs for individual services of up to 6 hours may be experienced. Only one shutoff per residence is expected. Hours and days of work for the project are Monday-Friday, 7:00 am to 6:00 pm.

We apologize for any inconvenience this project may cause you. For questions, or to schedule a shut off for an optimal time, please use the contact information provided above.
